Algebra 1 Lesson 7 6

In an algebraic expression, the coefficient of a variable is the constant the variable is multiplied by. If the variable appears by itself then it is regarded as being multiplied by 1 and the coefficient is 1. The coefficient of (x) in the expression $(3x + 2)$ is (3) . The coefficient of (p) in the expression $(5 + p)$ is 1.

Answers (Anticipation Guide and Lesson 7-1)

The Algebra 1 course, often taught in the 9th grade, covers Linear equations, inequalities, functions, and graphs; Systems of equations and inequalities; Extension of the concept of a function; Exponential models; and Quadratic equations, functions, and graphs. Khan Academy's Algebra 1 course is built to deliver a comprehensive, illuminating, engaging, and Common Core aligned experience!

Algebra I | Math | Khan Academy

Lessons 6 and 7 focus on factoring quadratic trinomials into a product of two linear binomials. In Lesson 6, all equations have a leading coefficient of 1, and in Lesson 7, students work with examples where the leading coefficient is not equal to 1. Depending on the needs of your students, these lessons may be left as separate lessons or combined into one lesson.
