Linear Equations by

Graphing Solve by
Graphing You can solve
an equation by
graphing the related
function. The solution
of the equation is the
 x - intercept of the
function. Example:
Solve the equation
 $2x - 2 = -4$ by
graphing. First set the
equation equal to 0.
Then replace 0 with
 rx).

Khan Academy**

Since distances are never negative, the absolute value of a number is always positive (or equal to zero). In order to make the equation true, the expression inside the absolute value, $x + 5$, can equal either -3 or 3 since the absolute value of both values is 3 . Write two equations and solve each. $x + 5 = -3$. $x = -8$, $x + 5 = 3$.
