Information Processing Model. The Information Processing Model is a framework used by cognitive psychologists to explain and describe mental processes. The model likens the thinking process to how a computer works. Just like a computer, the human mind takes in information, organizes and stores it to be retrieved at a later time.

Myers-Briggs theory is an adaptation of the theory of psychological types produced by Carl Gustav Jung. It is based on 16 personality types, which Jung viewed as stereotypes (Jung 1921, p. 405). They act as useful reference points to understand your unique personality (Jung 1957, p. 304). At the heart of Myers Briggs theory are four preferences.

Myers Briggs Personality Types - Introduction and Overview

Gagne's Nine Levels of Learning provide a step-by-step checklist that helps you ensure that you present a comprehensive and successful learning experience. Each step is designed to help your trainees understand and retain information effectively. Gagne's model can be combined effectively with other training methods, such as 4MAT and the ARCS model.

This theory stipulates that there are several different types or levels of learning. The significance of these classifications is that each different type requires different types of instruction. Gagne identifies five major categories of learning: verbal information, intellectual skills, cognitive strategies, motor skills and attitudes. Different internal and external conditions are necessary ...

Conditions of Learning (Robert Gagne ...

Second, cognitive information processing is not acceptable to all teachers. Many teachers would not agree with this idea of how learning takes place. For those who disagree with cognitive information processing, Gagne's theory of instruction would not fit their needs. Bibliography. Driscoll, M. P. (1994). Psychology of learning for instruction.
