Density Of A Penny Lab Answers

Thank you certainly much for downloading **density of a penny lab answers**. Most likely you have knowledge that, people have look numerous times for their favorite books afterward this density of a penny lab answers, but stop stirring in harmful downloads.

Rather than enjoying a fine book next a cup of coffee in the afternoon, otherwise they juggled like some harmful virus inside their computer. **density of a penny lab answers** is nearby in our digital library an online access to it is set as public appropriately you can download it instantly. Our digital library saves in combined countries, allowing you to get the most less latency times to download any of our books with this one. Merely said, the density of a penny lab answers is universally compatible as

Density of Pennies Concluding Questions

1. Compare the densities of pennies minted prior to 1982 and pennies minted after 1982. 2. According to the US Mint (www.usmint.gov), pennies minted before 1982 are made of copper. Copper has a density of 8.96 g/mL. Compare the density you calculated for pennies minted before 1982 to this accepted density.

Lab Investigation: Density of Pennies

Chemistry I Lab 1-2 Penny Density Lab In this lab, you will graphically determine and compare the density of two sets of pennies. Penny Set A was minted before 1982. Penny Set B was minted after 1982. In 1982, the U.S. Mint changed the composition of pennies. Before 1982, pennies were made entirely of copper. After 1982, pennies were made of ...

Lab 1-2 Penny Density Lab

If we use these values to calculate the density of a penny, we get: $\rho = \frac{4m}{\pi D^2} = \frac{4 \times 2.50\text{g}}{(0.152\text{cm})\pi(1.905\text{cm})^2} = 5.77 \frac{\text{g}}{\text{cm}^3}$ Compare this value to the density of pure zinc at 7.14 g/cm³ and we see we have a problem.

made after 1982 was measured at 6.90 g/mL. This confirms our hypothesis stating that the pre-1982 pennies would be more dense. It is believed that a change in the composition of pennies was made in 1982 to make them lighter.

The pre-1982 pennies had a density of 7.3g/ml. They are possibly made from zinc because the density of zinc is 7.14g/ml. The post-1982 pennies had a density of 8.5g/ml. They are possibly made from copper because the density of copper is 8.92g/ml. The mass measurements had 4 significant figures. The volume measurements had 1 significant figure.
