Evolutionary Dynamics Exploring The Equations

Any observation of a living system must ultimately be interpreted in the context of its evolution. Evolutionary change is the consequence of mutation and natural selection, which are two concepts that can be described by mathematical equations. Evolutionary Dynamics is concerned with these equations of life.

The resulting evolutionary dynamics are no longer described by deterministic differential equations, but require a stochastic formulation. The best approach for studying a biological problem is to try a deterministic description first and then move to a stochastic analysis only when the deterministic one misses relevant aspects.
