Point a laser at a mirror and compare the angle of the incoming beam to the angle of reflection. A protractor can be used to measure the angles of incidence and reflection, and the angle of the mirror can be adjusted. A beam splitter can be used to split the beam. Both plane and irregular mirrors can be used. Full Lesson Info

Reflections Gizmo : ExploreLearning

Gizmo Warm-up Flashlights produce wide beams of light that have various wavelengths. A laser, on the other hand, is a narrow beam of light with only one wavelength. All the waves in a laser beam are parallel to one another. As a result, lasers are ideal for studying reflection, or how waves bounce off a surface.

September is a great time to work on basic lab skills, but this can be hard to do during remote instruction. Luckily, students can practice using lab equipment with Gizmos! A great start is the Triple Beam Balance Gizmo. In the Gizmo, students can measure the mass of a variety of objects by adjusting the 100-g, 10-g, and 1-g riders.
