The benefit of magnetic nanomaterials compared to non-magnetic ones is their ability to respond to magnetic fields in a contact-free manner and over large distances. This allows to guide or accumulate them, while they can also be monitored. Recently, magnetic nanowires (NWs) with unique features were developed for biomedical applications.

Biofunctionalization of Magnetic Nanomaterials

It is readily comprehensible that therapies independent with oxygen are powerful weapons to treat hypoxic tumors. Free radicals are substances with strong oxidizing properties, which can induce cell death. Radical-generating nanomaterials can be used to treat tumor with oxygen dependence.
