### What would cause a manual transmission to lock up? | Yahoo ...

Nowadays all cars and trucks use a feature called lock-up in the torque converter. By way of fluid coupling, the torque converter transfers the power to the transmission without a clutch or clutch pedal. It cushions the shifts as they occur and makes the transition of power very smooth as the automatic transmission shifts.

### What is a Torque Converter and what does Lock-Up mean ...

Craig Douglas, president of highly rated Automotive Service Group in Indianapolis, says just like an automatic transmission, manual transmission fluid needs to be replaced to keep the internal components operating correctly. He adds that manufacturers have direct specifications, but recommends a fluid change around 45,000 to 60,000 miles.
