### **Motor Learning and Control: Concepts and Applications (Int ...**

Motor learning refers broadly to changes in an organism's movements that reflect changes in the structure and function of the nervous system. Motor learning occurs over varying timescales and degrees of complexity: humans learn to walk or talk over the course of years, but continue to adjust to changes in height, weight, strength etc. over their lifetimes.

### **Motor learning - Wikipedia**

Motor learning and the formation of motor memories can be defined as an improvement of motor skills through practice, which are associated with long-lasting neuronal changes. They rely primarily on the primary motor cortex, premotor and supplementary motor cortices, cerebellum, thalamus, and striatal areas ( Karni et al., 1998; Muellbacher et al., 2002; Seidler et al., 2002; Ungerleider et al ...
