In our previous post, we installed the PowerApps CLI and created a PowerApps custom component. In this post, we will go through the Microsoft sample here, where we add code to a PCF project, build the project, create a solution and deploy it to our PowerApps / Dynamics 365 environment to use on a field. First, let's create a directory LinearComponents to add our control code.

Walkthrough of Creating the Microsoft PowerApps PCF Sample ...

Build your component. To build the component project, open the project folder that contains package.json in Visual Studio Code and use the (Ctrl-Shift-B) command, then select the build options. Alternatively, you can build the component quickly using the npm run build command in the Developer Command Prompt for VS 2017 window.
