Inequalities in one triangle. In a triangle, we can order the lengths of the legs from shortest to longest if we know what the three angles of the triangle are. There is a nice rule that says, in a triangle, the shortest leg is opposite the smallest angle, the longest leg is opposite the largest angle, and the middle-length leg is opposite the middle-sized angle.

The triangle Inequality Theorem states that the sum of the lengths of any two sides of a triangle is greater than the length of the third side. Using this theorem, answer the following questions. 1) If two sides of a triangle are 1 and 3, the third side may be: (a) 5 (b) 2 (c) 3 (d) 4. 2) If the lengths of two sides of a triangle are 5 and 7, the length of the third side may . not. be:

The Triangle Inequality Theorem states that the lengths of any two sides of a triangle sum to a length greater than the third leg. This gives us the ability to predict how long a third side of a triangle could be, given the lengths of the other two sides. Example: Two sides of a triangle have measures 9 and 11.
